

Join us as a Building Services Engineer

Us:

We are a young and energetic business with a passion for sustainability and buildings that just work. We are looking for a building services engineer who shares our passion.

You:

You will be responsible for the design of mechanical and electrical systems but will also bring your firm grasp of building physics to bear on making each building efficient in the most holistic way. You will be able to manage your own projects, with support from the team. You will attend design team meetings and site inspections, and be confident dealing with clients, other consultants and contractors. Your drawing and written skills will be excellent, as you will be producing drawings, reports and specifications.

Your IT skills will be excellent, particularly in Excel and CAD. You must have a UK driving licence as you will need to get to meetings independently – but we do use public transport, walk and cycle whenever possible.

You will have good skills in practical problem solving. You will be motivated and ambitious and have desire to learn.

At times it can be hard graft. If the deadlines all come together, you will be expected to roll your sleeves up. But we operate a flexible time system so you can kick back when you need to. In return, you will get to be part of an exciting new business where no two days are the same. We will invest in your skills and knowledge and help you achieve your ambitions. You will be offered an ethical pension to which we will contribute. You will be based in the wonderful town of Bradford on Avon. Your salary will be circa £25000 p.a., depending on your experience.

To apply, send your CV and a covering letter to:

info@greengaugebuildingenergy.co.uk by Friday the 26th July.

54b Frome Road, Bradford on Avon BA15 1LA
